## FORWARD-LOOKING INFORMATION AND STATEMENTS

Certain statements contained in this Annual Information Form constitute forward-looking information and statements (collectively “forward-looking statements”). These statements relate to future events or our future performance. All statements other than statements of historical fact may be forward-looking statements. Forward-looking statements are often, but not always, identified by the use of words such as "seek", "anticipate", "budget", "plan", "continue", "estimate", "expect", "forecast", "may", "will", "project", "predict", "potential", "targeting", "intend", "could", "might", "should", "believe" and other similar expressions. These statements involve known and unknown risks, uncertainties and other factors that may cause actual results or events to differ materially from those anticipated in such forward-looking statements. We believe the expectations reflected in these forward-looking statements are reasonable but no assurance can be given that these expectations will prove to be correct and such forward-looking statements included in this Annual Information Form should not be unduly relied upon. These statements speak only as of the date of this Annual Information Form.

In particular, this Annual Information Form contains forward-looking statements pertaining to the following:

- expected equipment capacity in 2014 for all operating regions;
- expectation that the number of wells drilled in Canada in 2014 will be relatively consistent with those drilled in 2013;
- expectation that fracturing intensity per well in Canada will continue to increase in 2014 and lead to an increase in fracturing demand;
- expectation that fracturing job sizes will increase in Canada;
- expectation that commodity prices in 2014 will result in increased cash flow for our Canadian customers which will result in increased activity in the basin;
- expectation that the U.S. pressure pumping market will remain competitive throughout 2014;
- expectation that 2014 fracturing demand will remain stable in the Eagle Ford, Bakken and Oklahoma regions;
- expectation that we will continue to focus on improving utilization and decreasing costs for our U.S. areas of operation;
- intention to continue monitoring activity levels in the Haynesville and Barnett shale plays and react accordingly if industry conditions improve;
- expectation that there will be a year-over-year increase in Russian oil and gas activity and a continued increase in horizontal multi-stage well completions during 2014;
- the estimation that revenue for our Russian operations will increase in 2014 by 5% relative to 2013 based on consistent pressure pumping activity levels combined with a 7% increase in revenue per job;
- expectation that 2014 Russian pricing improvements will only cover inflationary cost increases;
- expectation that 2014 Russian operating margins will improve slightly in 2014 relative to 2013;
- expectation that the Kazakhstan market will continue to grow and technical solutions will become increasingly important within the region;
- intention to redeploy our Algerian assets to a more profitable region if improvements in utilization are not seen;
- belief that we are well positioned within our Australian relationships to take advantage of the expected growth in the development of coal seam and shale gas plays;
- expectation that Australian oil and gas activity continues to develop slowly;
- expectation that the Australian region will not generate a meaningful level of profitability in 2014;
- expectation that Trican will begin active work in the first half of 2014 in Saudi Arabia;
- expectation that we will continue to focus on establishing market presence in Saudi Arabia throughout 2014;
- expectation that Trican Colombia will initially provide cementing services, growing over time to become a full service pressure pumping company in the region;
- expectation that operations in Colombia will commence during the first half of 2014;
- the belief that natural gas prices in Canada will improve in the future and this will result in an increase in natural gas drilling;
- belief that Trican Canada’s service bases are well situated to meet the demand as unconventional resource development grows;

- expectation that Trican will maintain Canadian fracturing horsepower capacity at 413,500 HP in 2014;
- intention to grow the Canadian completion tools business in 2014;
- belief that Trican Canada is well positioned to maintain strong market position in Canada;
- expectation that Trican will continue to look at expanding service lines and geographic reach in the U.S. to achieve our goal of becoming a full service provider in all U.S. regions;
- intention to grow our completion tools business and increase profitability in the U.S. throughout 2014;
- anticipation of Russian gas fields being a promising growth area for Trican in future;
- belief that there is long term potential in the Russian market with significant oil and gas reserves throughout largely unexplored and undeveloped territory;
- belief that Trican Russia's services will be required to optimize production from Russian resource basins as producers move to more technically challenging reservoirs;
- intention to remain committed to maintaining a leading position within the Russian pressure pumping market and to invest in the people and technology to maximize the potential of this region;
- expectation that Australia will increase liquefied natural gas exports over the next 5 years; and
- expectation that there will not be a change in the Company's dividend policy;

The actual results could differ materially from those anticipated in these forward-looking statements as a result of the risk factors set forth below and elsewhere in this Annual Information Form:

- volatility in market prices for oil and natural gas;
- liabilities inherent in oil and natural gas operations;
- competition from other suppliers of oil and gas services;
- competition for skilled personnel;
- changes in income tax laws or changes in other laws and incentive programs relating to the oil and gas industry; and
- the other factors discussed under "Risk Factors".

Readers are cautioned that the foregoing lists of factors are not exhaustive. Forward-looking statements are based on a number of factors and assumptions which have been used to develop such statements and information but which may prove to be incorrect. Although management of Trican believes that the expectations reflected in such forward-looking statements or information are reasonable, undue reliance should not be placed on forward-looking statements because Trican can give no assurance that such expectations will prove to be correct. In addition to other factors and assumptions which may be identified in this document, assumptions have been made regarding, among other things: the impact of increasing competition; the general stability of the economic and political environment; the timely receipt of any required regulatory approvals; Trican's policies with respect to acquisitions; the ability of Trican to obtain qualified staff, equipment and services in a timely and cost efficient manner; the ability to operate our business in a safe, efficient and effective manner; the ability of Trican to obtain capital financing; the performance and characteristics of various business segments; the regulatory framework; the timing and effect of pipeline, storage and facility construction and expansion; and future commodity, currency, exchange and interest rates.

The forward-looking statements contained in this Annual Information Form are expressly qualified by this cautionary statement. We do not undertake any obligation to publicly update or revise any forward-looking statements except as required by applicable law.

Unless the context indicates otherwise, a reference in this Annual Information Form to "Trican", the "Company", "we", "us" or "our" refers to Trican Well Service Ltd. and, where appropriate in the context, to its direct or indirect subsidiaries and partnership interests.

All references herein to "\$" or "dollars" are to Canadian dollars except as otherwise stated.

## TRICAN WELL SERVICE LTD.

### Incorporation History

Trican Well Service Ltd. ("Trican") was incorporated under the *Companies Act* (Alberta) on April 11, 1979, under the name 216858 Oilwell Service Co. Ltd. The Company's name was changed to Trican Oilwell Service Co. Ltd. on May 15, 1979. The Company was continued under the *Business Corporations Act* (Alberta) by Articles of Continuance dated December 30, 1983. On September 17, 1996, the Company filed Articles of Amendment to amend its share capital to create common shares ("Common Shares") and preferred shares, and to redesignate and deem all outstanding shares to be Common Shares. On October 4, 1996, the Company filed Articles of Amendment to delete its private company restrictions. On June 4, 1997, Trican filed Articles of Amendment to change its name to "Trican Well Service Ltd." On January 1, 1999, Trican Well Service Ltd. and Superior Oilwell Cementers Inc. filed Articles of Amalgamation and the amalgamated company continued as Trican Well Service Ltd. On May 26, 2005, Trican filed Articles of Amendment to split the Common Shares on a three-for-one basis. On May 25, 2006, Trican filed Articles of Amendment to split the Common Shares on a two-for-one basis. On May 7<sup>th</sup> 2010, Trican closed a Common Share offering whereby 17,698,500 Common Shares were issued for aggregate proceeds of approximately \$230 million.

Our registered office is 3500, 855- 2<sup>nd</sup> Street SW, Calgary, Alberta, T2P 4J8 and our corporate head office is at Suite 2900, 645 - 7th Avenue S.W., Calgary, Alberta, T2P 4G8.

### Intercorporate Relationships

The following table sets forth the material operating subsidiaries owned directly or indirectly by Trican, their jurisdictions of formation and the percentage of voting securities beneficially owned, controlled or directed by Trican as at December 31, 2013.

Name of Subsidiary <sup>(1)</sup>	Jurisdiction of Formation	Percentage of Voting Securities Owned <sup>(2)</sup>
Trican Partnership <sup>(3)</sup>	Alberta, Canada	100.0%
Trican Well Service LLC	Raduzhny, Russia	100.0%
Trican Well Service, L.P.	Delaware, U.S.A.	100.0%

#### Notes:

- (1) This table does not include all of the subsidiaries of Trican. The assets, sales and operating revenues of unnamed operating subsidiaries of Trican did not individually exceed 10%, and in the aggregate did not exceed 20%, of the total consolidated assets or total consolidated sales and operating revenues, respectively, of Trican as at, and for the year ended, December 31, 2013.
- (2) None of the material subsidiaries have outstanding non-voting securities.
- (3) Effective March 1, 2001, Trican and its wholly-owned subsidiaries Northline Energy Ltd., Canadian Oilfield Stimulation Services Ltd. and Birchwood Industries Ltd. began carrying on business as the sole partners of the Trican Partnership, a general partnership formed pursuant to the *Partnership Act* (Alberta). Pursuant to agreements dated February 27 and March 1, 2001, each of the partners transferred substantially all of their respective net assets and operations to the Trican Partnership. The Trican Partnership, by its managing partner, Trican, assumed all of the rights, duties, liabilities and obligations of the partners pertaining to all lands, assets, contracts, agreements or any other interests whatsoever relating to the beneficial ownership of the assets transferred to the Trican Partnership. Effective March 28, 2007, Trican Geological Solutions Ltd. was added as a partner to the Trican Partnership.

## GENERAL DEVELOPMENT OF THE BUSINESS

### History

Trican is a multinational provider of specialized products, equipment and services used during the exploration and development of oil and natural gas reserves. Headquartered in Calgary, Alberta, Canada, Trican has a presence in nine countries: Canada, the United States, Russia, Kazakhstan, Algeria, Australia, Colombia, Norway and Saudi Arabia.

Since our initial public offering in December 1996, Trican has invested \$2.6 billion to expand our operations via capital expenditures and acquisitions. As a result of our expansion program, we have evolved from a regional supplier of cementing services in western Canada to one of the world's largest pressure pumping companies. This expansion has been accomplished through two basic growth strategies: diversifying the suite of services we offer to our customers and broadening our geographic base of operations.

Trican's geographic reach was first expanded outside the Western Canadian Sedimentary Basin ("WCSB") in 2002 with our entry into the Russian market. Since then we have further expanded the geographic scope of our operations through the commencement of operations in Kazakhstan, the United States, Algeria, Australia, Saudi Arabia, Norway and Colombia. Expansion into these geographic areas has been achieved through both organic growth and acquisitions. Expansion into the United States was initially through an acquisition, and since 2008 we have primarily expanded our U.S. operations organically. Trican expanded into Australia through the acquisition of a private enterprise in 2011. Trican expanded into both Saudi Arabia and Colombia through separate joint business arrangements in 2010 and 2012, respectively. Most recently, Trican expanded into Norway through an acquisition of a private enterprise in early 2013.

Trican enhanced its existing services by making significant investments in new equipment and facilities and assembling what we estimate to be one of the newest and largest equipment fleets in western Canada with 413,500 horsepower ("HP") of pressure pumping capacity. In the United States, we currently have eighteen available fracturing crews, all of which are less than 7 years old, with a total pumping capacity of 670,000 HP. Trican Russia and Trican Kazakhstan together currently operate 135,350 HP and maintain a leading position in the Russian and Kazakhstan fracturing market.

Trican's research and development efforts remain focused on providing specific solutions to the problems experienced by our customers in the geographic areas in which we operate. To support our ongoing research and development initiatives, we maintain one of the largest laboratories of its type in western Canada. This state of the art facility is a key element in our ongoing effort to be the leading provider of technology to the oil and gas sector. To support this goal, particularly in regard to the development of unconventional natural gas reserves, in March 2007 we acquired Trican Geological Solutions Ltd., previously known as CBM Solutions Ltd., a Calgary-based technology company that specializes in the provision of geological and engineering services related to the development of these reserves. In addition, Trican opened research and development centers in Russia and the U.S. to ensure that the Company continues to provide innovative solutions to the specific problems our customers are encountering in each of these key markets. The Russian centre was opened in 2012 and the U.S. centre in 2011.

Trican entered into the global horizontal multi-stage completion market in early 2013, with the acquisition of Petro Tools Holding AS, the parent company of i-TEC Well Solutions AS ("i-TEC"). i-TEC was a privately owned company based in Norway that has developed a field-proven portfolio of completion systems and intervention tools. This acquisition complements Trican's existing completions systems and tools business.

### *Canada*

In Canada, Trican operates in a variety of the sectors of the oilfield pressure pumping services industry including: cementing, fracturing, coalbed methane ("CBM") fracturing, acidizing and production enhancement, CO<sub>2</sub> fracturing, coiled tubing, nitrogen, reservoir management, microseismic fracture mapping, industrial cleaning and pipeline, and completion systems and downhole tool services. Trican offers these services to customers from operations bases located across the WCSB. A description of each of Trican's various services can be found under "Description of Services" in this AIF.

In 2011, Canadian demand for pressure pumping was strong and led to record financial results for our Canadian operations. The industry saw a 21% increase in the number of active drilling rigs compared to 2010, led largely by oil and liquids rich-gas directed activity. Throughout 2011, natural gas prices remained weak as production from shale plays in the U.S. and Canada continued to keep gas inventory at high levels. This led to a decrease in dry gas drilling during 2011, which partially offset the increased drilling in oil and liquids-rich gas reservoirs. Canadian results also benefitted from increased demand for fracturing services performed on horizontal wells. During 2011, we executed a Canadian capital budget of \$215 million, which included 62,500 HP of additional fracturing capacity, five cementing units, and additional acidizing and nitrogen equipment. Overall, 2011 Canadian revenue increased

49% compared to 2010, and operating income as a percentage of total revenue improved to 36.2% compared to 32.8% in 2010.

In 2012, Canadian demand for pressure pumping began strong, but weakened in the second half of 2012 due to declines in industry activity levels combined with an increase in available pressure pumping equipment. The Canadian industry saw a decrease in overall rig count of 13% over 2011, largely due to the low natural gas prices combined with reduced customer cash flows due to large negative price differentials between Alberta oil and West Texas Intermediate ("WTI"). This led to decreases in both gas drilling as well as oil directed drilling. The Canadian industry was further impacted by an increase in pressure pumping equipment with the large 2012 capital budgets undertaken by Trican and several of our Canadian competitors. These large budgets were in response to a significant undersupply of equipment as we exited 2011. The increase in capacity combined with reduced demand led to decreased pricing in 2012. During 2012, Trican's fracturing fleet increased by 28% and we exited 2012 with 413,500 HP. Overall, Canadian revenue in 2012 decreased 11% compared to 2011 and operating income as a percentage of total revenue decreased to 27.1% from 36.2% in 2011.

Overall pressure pumping demand in Canada increased in 2013 compared to 2012; however, a 22% average decrease in price more than offset the higher demand. The Canadian pressure pumping industry added a significant amount of equipment to the region throughout 2011 and 2012, and the increased equipment supply led to reduced pricing in 2013. As a result, 2013 capital spending for our Canadian operations was down significantly compared to 2012. Year-over-year Canadian demand increases were largely due to an increase in horizontal drilling, an increase in fracturing stages per well and increased activity in emerging Canadian plays, such as the Duvernay. The average Canadian rig count in 2013 was relatively unchanged compared to 2012. Overall, Canadian revenue for 2013 decreased by 10% compared to 2012 and operating margin decreased by 740 basis points.

We currently expect the number of wells drilled in Canada in 2014 to be relatively consistent with total wells drilled in 2013. We believe that fracturing intensity per well will continue to increase in 2014 and lead to an increase in year over year fracturing demand. Fracturing intensity per well is expected to increase due to a rise in fracturing stages per well as we continue to see an increase in multi-stage horizontal wells drilled in Canada relative to vertical wells. In addition, we expect to see an increase in fracturing job size. Commodity prices are currently higher than originally forecast for the Canadian market. This is expected to result in increased cash flow for our customers, which normally results in increased activity in the basin. We may revise our activity expectations for the second half of 2014 if customers increase their 2014 capital budgets in the near future.

### *United States*

In the United States, Trican operated under the name Liberty Pressure Pumping LP ("Liberty") from March 8, 2007 to December 21, 2009. Effective December 22, 2009, Liberty changed its name to Trican Well Service, L.P. ("Trican U.S. "). Trican U.S. provides fracturing, cementing, nitrogen, acidizing, and coiled tubing services from eight operating bases located in Springtown, Texas; Longview, Texas; Minot, North Dakota; Woodward, Oklahoma; Shawnee, Oklahoma; Mill Hall, Pennsylvania; Mathis, Texas; and Odessa, Texas. During 2011, Trican's U.S. regional office relocated to Houston, Texas from Denton, Texas. From the acquisition of Liberty in March 2007 to the end of 2013, Trican has invested \$940 million in Trican U.S.'s equipment and operating facilities, expanding our operational reach and service offering.

Trican U.S. has a presence in most of the major shale plays in the U.S., operates a fracturing fleet with 670,000 HP and recently continued expansion into other service lines. This capacity is divided as follows: fourteen fracturing crews operating out of all eight U.S. bases; cement crews operating out of bases in Longview and Mathis; acid crews operating out of bases in Longview and Shawnee; and coiled tubing crews operating out of bases in Mathis and Woodward. Four U.S. fracturing crews, or approximately 175,000 fracturing HP, is inactive as of the date of this report.

In 2011, U.S. revenue increased by 105% and operating income increased by approximately 173% compared to 2010. U.S. financial results in 2011 benefitted from strong demand for pressure pumping services, continued strength of horizontal drilling activity, and execution of our 2011 U.S. capital budget. Trican's 2011 U.S. capital budget included the addition of 205,000 fracturing HP, 10 cementing units and six coiled tubing units. In addition, new operating bases were opened in Mathis and Odessa, Texas. Strong oil prices contributed to U.S. growth in areas

containing oil and liquids-rich gas, such as the Eagle Ford, Permian and Oklahoma regions. Conversely, weak natural gas prices led to a decrease in year-over-year rig count in dry gas areas such as the Haynesville, Fayetteville and Barnett shales.

In 2012, U.S. revenue increased by 8% while operating income decreased by 113% compared to 2011. Trican continued to grow in the U.S. in 2012, with available fracturing capacity increasing by 30% to 670,000 HP. In addition, Trican U.S. opened a new base in Minot, North Dakota and continued to expand our cementing, coil tubing, acidizing and nitrogen service lines. Despite the growth, operating margins were negatively impacted by several factors including stagnant industry activity levels, costs associated with redeployment of equipment, increased guar costs and excess equipment supply. These factors led to disappointing financial results in 2012 for our U.S. operations.

U.S. revenue in 2013 decreased by 4% compared to 2012, primarily due to lower pricing for the U.S. fracturing service line, offset partially by growth in the U.S. cementing and completion tools operations. The U.S. pressure pumping market was over supplied with equipment at the beginning of 2013 and remained over-supplied throughout the year. These weak market fundamentals made it difficult to maintain strong utilization levels throughout all of our U.S. operating regions and also kept downward pressure on pricing throughout most of the year. Successful cost cutting initiatives and a reduction in guar costs led to year-over-year improvements in U.S. operating margins. These margin improvements were partially offset by lower pricing.

Although we expect the U.S. pressure pumping market to remain competitive throughout 2014, we are starting to see signs of improving fundamentals in the Permian and Marcellus plays. The horizontal rig count continues to increase in the Permian, which is leading to an increase in fracturing demand. In addition, improving natural gas prices have led to increased optimism for 2014 demand increases in the Marcellus. We expect 2014 fracturing demand to remain stable in the Eagle Ford, Bakken, and Oklahoma regions and we will continue to focus on improving utilization and decreasing costs, where possible, for our operations in these areas. Activity levels remain low in the dry gas plays, including the Haynesville and Barnett shale plays; however, given the recent increase in natural gas prices, we will continue to monitor activity levels in these regions and react accordingly if industry conditions improve.

### ***Russia***

In 2002, Trican invested in Newco Well Services LLC ("Newco"). Effective December 3, 2009, Newco changed its name to Trican Well Service LLC ("Trican Russia"). Trican made its initial investment in Newco in 2002, and currently owns a 100% interest in Trican Russia via a 100% ownership in R-Can Services Ltd. a wholly-owned Cypriot subsidiary.

Trican Russia initially provided cementing services to a variety of customers in the Tyumen region of western Siberia and then subsequently expanded its service line to include fracturing and coiled tubing services. Russian work is largely oil-directed but there has been some diversification into gas with the commencement of work for OAO Gazprom, Russia's largest gas production company. Trican Russia conducts its operations through bases situated in western and eastern Siberia.

2011 Russian revenue and activity levels were consistent with overall expectations for the region, based on the results from the 2011 tendering process. Activity levels increased by approximately 7% and operating margins were relatively flat, as pricing increases were fully offset by higher costs. Cost inflation was a factor during the first half of the year, but stabilized during the second half of the year. Despite the slowdown in overall inflation, our Russian operations experienced cost increases for items such as hauling, fuel and products during the second half of the year. Trican Russia's 2011 capital budget totalled \$24 million, including \$3 million in expansion capital and \$21 million in infrastructure and maintenance capital.

Trican Russia's operations performed slightly below expectations in 2012. Revenues were down 6% over 2011, as a result of delays in customer work programs and a 4% year-over-year decrease in the average annual value of the ruble relative to the Canadian dollar. Despite the lower year-over-year revenue, the emergence of horizontal completions and multi-stage fracturing was a positive development in 2012. Approximately 12% of Trican Russia's 2012 fracturing revenue was from horizontal well work, compared to 3% in 2011.

In 2013, the Russian pressure pumping market continued to benefit from an increase in horizontal drilling and completions activity in the region. Revenues were up 20% over 2012. Despite the activity increases in Russia, heavy competition, which kept pricing increases to a minimum, and cost inflation limited the operating margin improvements during 2013.

Trican expects to see a year-over-year increase in Russian oil and gas industry activity and a continued increase in horizontal multi-stage well completions during 2014. Management is currently estimating 2014 revenue to increase by 5% relative to 2013. The estimated revenue increase is based on consistent pressure pumping activity levels combined with a 7% increase in pressure pumping revenue per job, partially offset by a small decrease in completion tool revenue. The Russian markets remain competitive and we expect 2014 pricing improvements to only cover inflationary cost increases. As a result, it is expected that 2014 Russian operating margins will improve slightly in 2014 relative to 2013, due to the expected increase in activity.

### ***Kazakhstan***

Trican Well Service LLC began operations in Kyzylorda, Kazakhstan in 2005 with a large fracturing contract secured from a western customer operating in the area. In 2009, a second operating base was opened in Aktau, Kazakhstan to meet the increased demand for fracturing services in the region. The majority of the activity within the region is directed at oil wells, as Kazakhstan has approximately 8 billion tonnes of proven recoverable oil reserves.

Activity levels were strong in Kazakhstan during 2011 and 2012, and the utilization of our equipment remained high during these years. Activity levels were supported by strong oil prices, as well as government initiatives that targeted production increases and promoted foreign investment in the Kazakhstan oil and gas industry. 2013 was another strong year for both of our Kazakhstan fracturing crews with revenue and utilization consistent with 2012.

The oil and gas industry in Kazakhstan is still in the early stages of development and the pressure pumping market is small with relatively basic technological needs. However, we believe the Kazakhstan market will continue to grow and technical solutions will become increasingly important within the region.

### ***Algeria***

In Algeria, Trican operates out of one base in Hassi Messaoud. Trican runs two coiled tubing units, two nitrogen pumpers and two twin fluid pumpers in the region. Financial results for Algeria are included in our International financial results.

In 2010, our primary Algerian customer underwent internal reorganization, which delayed production activities and led to low utilization of our equipment. These issues continued to create a difficult administrative environment and delayed tenders. The customer delays carried into the first half of 2011, and it was not until the latter part of 2011 that we began to see increased activity levels. This resulted in Algerian financial results that were below our expectations in 2010 and 2011.

In 2012, Trican saw modest improvements in pricing and utilization improvements for our coil tubing service line. These improvements were partially offset by weak results in our cementing service line. In 2013, we shut-down our cementing operations in Algeria as the utilization and pricing for this service line were below acceptable levels. In addition, 2013 coiled tubing financial and operating results were down compared to 2012 due to continued challenges in maintaining acceptable utilization levels.

Algeria continues to be a challenging market and if improvements in utilization are not seen, we will consider redeploying our assets into a more profitable region.

### ***Australia***

In July of 2011, Trican entered the Australian market through the acquisition of a privately owned company that provides cementing and environmental services in Eastern Australia. With an operating base in Roma, Queensland, Trican operates five cement pumpers, along with associated ancillary equipment and fluid logistics equipment.

During 2012 and 2013, Trican continued to establish relationships and demonstrate our technical qualifications with our customers in the region. We believe we are well-positioned with these relationships to take advantage of the expected growth in the development of coal seam and shale gas plays. Australia has endeavored to become the second largest exporter of liquefied natural gas within five years, and is targeting the construction of ten LNG facilities by 2020. However, Australia oil and gas activity continues to develop slowly and we do not expect this region to generate a meaningful level of profitability in 2014.

### ***Saudi Arabia***

In 2010, Trican entered into a joint venture agreement with a partner in Saudi Arabia. During 2011 and 2012, we made progress in establishing our technical qualifications with Saudi Aramco and developing a sales presence within the region. We submitted bids for work tenders in 2013 to provide coil tubing and industrial services to customers in Saudi Arabia. We expect to begin active work in the first half of 2014 and will continue to focus on establishing our market presence in this region throughout 2014.

### ***Colombia***

In November 2012, Trican announced its entry into Colombia through a joint business agreement with Independence Drilling S.A. ("Independence"). Independence is a privately held company headquartered in Bogota, Colombia and has extensive experience in the provision of drilling services in the region. Trican intends to initially provide cementing services in the Colombian market, growing over time to become a full service pressure pumping company in the region. We expect to commence operations in Colombia during the first half of 2014.

## **DESCRIPTION OF THE BUSINESS AND OPERATIONS**

### **General**

The upstream oil and gas industry is comprised of two types of companies: service companies and exploration and production companies. Exploration and production companies generally explore for, develop and produce oil and gas reserves. Service companies provide specialized equipment, products and services to support the exploration, development and production of oil and gas.

Oil and gas reserves are generally located in permeable rock reservoirs accessible primarily by drilling. Optimization of the recovery of reserves requires highly sophisticated procedures and technology. In order to remain competitive, service companies are required to develop and apply technology to specific exploration and development problems to recover additional reserves. North America has been a prime source of this technology. This is particularly true of Canada where, on a global scale, oil and gas reserves per well are relatively small, encouraging oil and gas companies to develop and apply new technologies to enhance recovery.

### **Overview of Operations**

Trican provides a comprehensive array of specialized products, equipment and services that are used during the entire lifecycle of an oil or gas well. Trican is a global provider of pressure pumping services with operations in western Canada, the United States, Russia, Kazakhstan, Algeria, Australia, Colombia, Saudi Arabia, and Norway. Pressure pumping services are typically considered to include fracturing, CBM fracturing, cementing, acidizing, nitrogen and coiled tubing services.

### ***Canadian Operations***

Since 2008, the Canadian market has undergone significant changes with the emergence of unconventional oil and gas plays and related horizontal drilling throughout the WCSB. Trican's activity levels, as measured by job count, had typically been directly proportional to the number of wells drilled in the basin. With the emergence of unconventional oil and gas plays, we have seen a divergence from this trend. Most unconventional oil and gas reservoirs are developed using horizontal wells, which must be fractured several times along the horizontal length to achieve commercial gas rates. The fracturing treatments on these wells are usually much larger than conventional treatments, requiring larger fracturing crews and using significantly higher HP per crew, which drives higher

revenue per job. In addition, the number of fracture treatments on each well typically ranges between ten and forty compared to two to four for conventional wells. Equipment utilization rates also tend to improve with horizontal wells, as the equipment will remain on the same well until all fracturing treatments are completed. In some cases, the fracturing treatments are performed one after the other with no break between fracturing jobs. On larger jobs, the interval between treatments ranges between four hours and one day. The increase in the number of fracture treatments also positively impacts activity of our coiled tubing units which are used during fracturing operations to clean out the well before and after fracturing, to lift fluid from the wellbore and to drill out plugs and other tools that are left in the well following the completion of the fracturing treatments.

The majority of services offered by Trican in Canada are used during the drilling and completion of oil and gas wells. In the past five years, we have seen a decrease in the number gas wells drilled in comparison to the number of oil wells drilled, largely due to the lower price of natural gas, and comparatively strong oil prices. However, the natural gas market is cyclical and we believe that natural gas prices will improve in the future, which is expected to result in an increase in natural gas drilling.

Trican is one of the largest full service pressure pumping companies in Canada. We maintain a dominant market position within the unconventional oil and gas plays in the WCSB, and we believe our service bases are well situated to meet the demand as unconventional resource development grows. During 2014, we expect to maintain our fracturing horsepower capacity at 413,500 HP.

Trican's Canadian operations have been offering completion tools services to Canadian customers for several years, primarily through our burst port system ("BPS") completion tool. With the purchase of i-TEC in early 2013, the portfolio of completion tools was significantly expanded. The growth of this division was strong in 2013 and we will look to continue to grow the Canadian completion tools business in 2014.

The table below shows the progression of our domestic fleet over the past four years, as well as the expected equipment capacity for 2014. With this extensive fleet and our well-trained personnel, management of Trican believes that we are well positioned to maintain our strong market position in Canada.

**TABLE 1**

Number of Units at year end (Canada)	2010	2011	2012	2013 <sup>B</sup>	2014 <sup>C</sup>
Fracturing Crews <sup>A</sup>	18	18	21	22	22
HP	258,700	321,250	413,500	413,500	413,500
Cement Pumpers	48	53	56	55	55

Fracturing services	64%	61%
Cementing services	18%	21%

### *United States Operations*

Fracturing has comprised a large portion of the services offered to date by Trican U.S. We have focused on building a solid platform in the unconventional oil and gas plays in the U.S. As in Canada, it was considered virtually impossible to produce gas in commercial quantities from these plays until recent improvements were made in hydraulic fracturing technology and horizontal drilling. The majority of land-based wells drilled over the last 10 years in the U.S. have targeted natural gas reserves. However, with the application of horizontal fracturing technology to oil formations, combined with the continuing strength of oil prices and relative weakness in natural gas prices, a shift toward more oil and liquids-rich drilling activity became further evident in 2011 and throughout 2012 and 2013.

Trican U.S. operates a fracturing fleet of 670,000 HP out of eight bases across the United States. Trican's current U.S. operations cover most of the major oil and gas basins in the U.S., including the Marcellus, Permian, Eagle Ford, Bakken, Granite Wash, Woodford, Haynesville, and Barnett plays. Trican closed its base in Searcy, Arkansas during 2012 due to weak activity levels in the dry gas Fayetteville play. This base will remain closed until activity levels increase in the Fayetteville region.

In the latter part of 2008, Trican U.S. began to offer cementing services in Longview. We added acid services to Longview in 2009 and Shawnee in 2010. During 2011, we initiated coiled tubing services in Woodward and Mathis as well as cementing services in Mathis. We continue to look at expanding our service lines and geographic reach in the U.S. to achieve our goal of becoming a full service provider in all of our US regions.

Through the purchase of i-TEC, Trican began offering completion tools to the U.S. market in early 2013. The focus throughout 2013 was to establish the market for Trican's portfolio of completions tools with U.S. customers. We were pleased with the progress made by U.S. completions tools division throughout 2013 and saw sequential increases in revenue and profitability from the first quarter through to the fourth quarter of 2013. We continue to see good customer acceptance of our completion tools in the U.S. and will look to grow this business and increase profitability throughout 2014.

The table below shows the progression of our U.S. fleet over the past four years, as well as the expected equipment capacity for 2014.

**TABLE 3**

<b>Number of Units at year end (U.S.)</b>	<b>2010</b>	<b>2011</b>	<b>2012</b>	<b>2013<sup>B</sup></b>	<b>2014<sup>C</sup></b>
Fracturing Crews <sup>A</sup>	10	15	18	18	18

### ***Russian Operations***

Although gas fields in Russia are anticipated to be a promising growth area for Trican in the future given the significance of their gas reservoirs, oil reservoirs have been the focus of development in Russia to date. Unlike North America where fracturing is used mainly in gas and oil fields, in Russia, it is almost entirely used in oil reservoirs.

The Russian oil industry increased production by approximately 50% from 1999 to 2004. Over half of this increase was the result of fracturing treatments on fields that had already been producing in Soviet times and which by the 1990s were experiencing significant production declines.

The use of fracturing to increase the production of wells grew slowly in Russia, partly because of the disarray in the Russian oil industry in the 1990s and partly because of low oil prices. However, as the price of oil increased the number and size of fracturing jobs performed each year grew rapidly. The number of fracture treatments in Russia increased from 2,000 treatments in 2000 to over 3,500 treatments in 2004.

In the midst of this growth, Trican made its initial investment in Trican Russia which was providing cementing services to a variety of customers in the Tyumen region of western Siberia. As fracturing of existing underperforming wells was introduced to deal with nation-wide production declines, Trican Russia added fracturing to its service offerings and it became the focus of its growth strategy. Trican Russia experienced a significant increase in demand for fracturing services as well as an increase in average size of well treatments. Trican Russia also expanded its geographic reach to support demand from its customers.

The demand for fracturing and fracturing related services remains strong in Russia and continues to be influenced by the price of oil. Trican believes in the long term potential of the Russian market, as this region contains significant oil and gas reserves throughout largely unexplored and undeveloped territory. Russian producers of oil and gas have a ready market, and the region is the primary supplier of energy to Europe. Trican believes its services will be required to optimize production from Russian resource basins, as producers move to more technically challenging reservoirs. Trican is committed to maintaining a leading position within the Russian pressure pumping market, and intends to invest in the people and technology to ensure we maximize the potential of this geographic region.

The table below shows the progression of our domestic fleet over the past four years, as well as the expected equipment capacity for 2014.

**TABLE 5**

<b>Number of Units at year end (Russia and Kazakhstan)</b>	<b>2010</b>	<b>2011</b>	<b>2012</b>	<b>2013<sup>B</sup></b>	<b>2014<sup>C</sup></b>

**Algerian Operations**

In October 2007, Trican commenced operations in Algeria pursuant to a contract with a Canadian exploration and production company for the provision of coiled tubing and nitrogen services. The majority of equipment required under this contract was transferred from our Canadian operating fleet.

Trican currently offers coiled tubing services in Algeria. In 2013, the cementing equipment was transferred out of the region.

The table below shows the progression of our domestic fleet over the past four years, as well as the expected equipment capacity for 2014.

**TABLE 7**

<b>Number of Units at end of year (Algeria)</b>	<b>2010</b>	<b>2011</b>	<b>2012</b>	<b>2013<sup>A</sup></b>	<b>2014<sup>B</sup></b>

Coil tubing services	90%	72%

**Australian Operations**

Trican entered the Australian market in 2011, through the acquisition of a cementing and environmental services company.

The Australian oil and gas industry is primarily a natural gas market with significant coal seam and shale gas plays in the Northeast quadrant of Australia. It is the world's fifth largest exporter of liquefied natural gas but has plans to increase exports over the next five years to become the largest.

Trican currently has modest cementing operations in Australia. We also provide environmental services, which involve the transportation and handling of water produced primarily from coal seam gas wells. Equipment used to provide environmental services include vacuum trucks and water haulers as well as access to an Environmental Protection Agency approved disposal site.

## ***Norwegian Operations***

Trican entered the Norwegian market in 2013 through the purchase of i-TEC. Trican provides completion tools to customers operating in the offshore North Sea market.

## **Description of Services**

### ***Acidizing and Production Enhancement***

Acid is used to stimulate production in all types of formations including injection, gas and/or oil producing, and disposal wells. Acids can be categorized into organic and inorganic, and various combinations of these two types are also used in specialty applications. Acid treatment types can be defined by injection rate and pumping pressure. Acid stimulation treatments carried out below formation fracture pressures are termed "Matrix Acidizing Treatments", while those carried out at pressures greater than formation fracture pressures are categorized as "Fracture Acidizing Treatments".

### ***Carbon Dioxide ("CO<sub>2</sub>")***

CO<sub>2</sub> is used to energize a stimulation fluid in both fracturing and acidizing applications. CO<sub>2</sub> is pumped as a liquid at -18°C (0°F), and expands to a gas as the well is flowed back. After the treatment is completed and the pressure decreases, the liquid CO<sub>2</sub> expands significantly to lift fluids to the surface. This is known as the "pop bottle effect". Liquid CO<sub>2</sub> is also an excellent stimulation fluid that is used when formation damage due to fluid retention is suspected.

### ***Cementing***

Primary cementing is one of the most important operations performed on a well in order to ensure complete zonal isolation and aquifer protection. Without it, the well may never reach its full production potential, and liquids from one zone could interfere with another.

After drilling a well, steel pipe called casing is inserted into the hole. Cement is pumped down this pipe and up the annulus between the pipe and the newly drilled hole. In most wells, at least two strings of casing are run: one near the surface called "surface casing" and a second across the producing zone called "production casing". In some deeper wells, up to four strings are run. Trican cements all the casing strings in the well and will often travel to the well two to four times while it is drilled.

### ***Coiled Tubing***

Coiled tubing ("CT") is a continuous (without joints) reel of steel pipe that can be manufactured in any length desired. The pipe, which typically comes in varying sizes, is spooled onto a large diameter reel and can be run into any oil or gas well. In general terms, coiled tubing is used as a conduit to circulate and place fluids and gases into the wellbore at a specific depth for either reservoir stimulation or wellbore cleanout purposes. CT is also used to convey tools for a multitude of functions including zonal isolation, perforation, fracturing, drilling, jetting, etc. Trican designs and manufactures specialized tools tailored to these functions and customer-specific needs. CT can also be used for specialized applications such as pipeline cleanouts, temporary flowlines or even as a replacement for conventional production tubulars in the right application.

The major advantage of using CT technology over regular jointed tubing is the ability to safely work on a live well without the need to kill it. Secondary advantages can be the increased speed of running a CT string in and out of a well, which has the potential to save time on some operations when compared to conventional jointed pipe.

### ***Fracturing***

Fracturing is a well stimulation process performed to improve production from geological formations where natural flow is restricted. Fluid is pumped into a well at sufficiently high pressure to fracture the formation. A proppant

(sand or ceramic material) is then added to the fluid and injected into the fracture to prop it open, thereby permitting the hydrocarbons to flow more freely into the wellbore. Once the sand has been placed into the fracture, the fluid flows out of the well leaving the sand in place. This creates a very conductive pipeline into the formation.

Normal fracturing operations require that the fluid be viscosified to help create the fracture in the reservoir and to carry the proppant into this fracture. After placing the proppant, the viscous fluid is then required to "break" back to its native state with very little viscosity so it can flow back out of the well, leaving the proppant in place.

Increasingly, non-viscous slick water fracturing treatments are being pumped into shale and tight (low permeability) reservoirs, which are called unconventional reservoirs. These slick water treatments carry proppant without the need of viscosifiers, resulting in reduced cost.

### ***Geological***

Geological services specialize in the provision of geological and engineering services for unconventional gas wells, including gas content analysis, rock mechanics, reservoir characterization and consulting services for CBM and shale gas wells.

### ***Completion Systems and Downhole Tool Services***

Trican offers a wide array of solutions in multi-stage fracturing completions. Our Completions Systems and Downhole Tools Services team builds upon Trican's extensive cementing, fracturing and stimulation experience to provide the following services:

- Cemented and Open Hole Completion Systems for Horizontal Multi-Stage Fracturing
- Coiled Tubing Drilling Services
- Coiled Tubing Intervention Tools and Services
- Conventional Well Construction and Completion Tools

### ***Microseismic Fracture Mapping***

Microseismic fracture mapping provides customers with a graphic representation of a fracture by monitoring the seismic events induced by the treatment being pumped. Monitoring is done through multiple receivers deployed in one or several neighbouring wellbores. These seismic events are then used to create an image of the fracturing treatment, displaying the geometric properties created by the fracture. These properties, along with other data, suggest how to pump fractures in subsequent wells.

### ***Nitrogen***

Nitrogen ("N<sub>2</sub>") is an inert (non-reactive) gas that is pumped into a wellbore to improve the safe recovery of introduced and produced fluid, while reducing the potential of formation damage. As a result of being an inert gas and the most abundant component in the Earth's atmosphere (78%), N<sub>2</sub> is intrinsically safe, easily accessible and in widespread use in the oilfield. Gaseous N<sub>2</sub> is most commonly used in the oilfield to displace or lighten fluids. This feature allows oil or gas to more easily flow from the well. Nitrogen is also pumped into many surface facilities and pipelines to purge air from the piping prior to welding and cutting. Trican's nitrogen units are used by themselves and in conjunction with our other service lines.

### ***Industrial Services***

Industrial services offers engineered solutions and services to oil sands, heavy oil, refinery, petrochemical, gas process, power generation, mining and pipeline facilities. Specialty services include mechanical and chemical descaling and passivating of process facilities, pipelines and storage tanks. Engineered services also include nitrogen displacement of pipelines and process facilities, nitrogen cooling and warming of process reactors, and pressure testing and leak detection of pipelines and process facilities. We offer a number of services to industrial plants, oil and gas facilities and pipeline operations.

## **Economic Dependence**

Trican's business is primarily distributed across three geographic markets, Canada, the United States and Russia. The Company's customers in the Canadian and U.S. markets consist of a large number of oil and gas companies that vary in size.

The Russian market consists of a smaller number of large oil and gas companies, yet for the year 2013, no one customer represented a significant proportion of total consolidated revenue.

## **Changes to Contracts**

The Company operates under a number of key supplier and customer arrangements. These contracts define the commercial terms under which materials will be supplied or work will be undertaken. The majority of the arrangements do not contain a guaranteed minimum commitment of materials or work.

In October 2011, the Company replaced its existing Revolving Credit Facility with a new syndicated CAD \$450 million four-year extendible Revolving Credit Facility (the "New Facility"). The New Facility is unsecured and bears interest at Canadian prime rate, Banker's Acceptance rate or at LIBOR plus 50 to 325 basis points, dependent on certain financial ratios of the Company. The New Facility requires Trican to comply with certain financial and non-financial covenants that are typical for this type of arrangement. During 2012, Trican received approval to add a new bank to its syndicate and increased its extendible revolving credit facility from \$450 million to \$500 million. During the fourth quarter of 2013, Trican's syndicate of banks unanimously agreed to extend the Company's four year revolving credit facility for an additional year to 2017.

## **Employees**

As at December 31, 2013, Trican had 6,103 employees worldwide.

## **Foreign Operations**

Trican's principal operations are in Canada; however, over the past few years the Company has invested significantly in its foreign operations in the United States and Russia. Our U.S. operations are conducted through a subsidiary which represented 36% of Trican's total consolidated assets as of December 31, 2013. Our International Operations, which include Russia, Kazakhstan, Algeria, Australia, Saudi Arabia, Colombia and Norway, are conducted through subsidiaries that represented 14% of Trican's total consolidated assets as of December 31, 2013.

## **Social and Environmental Policies**

Trican is committed to maintaining a safe working environment for our employees, to protecting and conserving the environment in which we operate and to protecting the health of all persons in the communities directly or indirectly affected by our corporate presence. To this end, we have implemented safety and training programs designed to improve performance and to raise awareness of the importance of safety in our operation and an environmental policy designed to minimize the impact of our operations on the environment in which we operate.

In order to implement these policies, each employee of Trican is provided a copy of the Safety Process and Policies Handbook and is expected to familiarize him or herself with its contents. Each employee is delivered a new handbook annually and is required to provide an annual certificate that they understand and agree to follow its requirements. This handbook provides information on regulations and responsibilities, worksite requirements, hazard identification, hazardous material handling, personal protective equipment and reporting of accidents. Further, each new employee of Trican receives an employee orientation manual that contains further information about the corporate safety and environmental policies, safety responsibilities and incident reporting, and further, each new employee is required to attend an extensive orientation training program which includes detailed training on a wide variety of topics including a significant safety component.

On August 4, 2010, the Company formed a Health, Safety and Environment ("HSE") Committee of the Board of Directors to assist the directors in meeting their responsibilities in regard to the establishment of appropriate

environment, health and safety policies and procedures and ensuring that the Company complies with applicable legal obligations in these areas. As of the date of this AIF, the committee is currently comprised of three independent directors and one management director, roles currently filled by Kenneth M. Bagan, Douglas F. Robinson, Dean E. Taylor and Donald R. Luft.

Our HSE Committee is responsible for reviewing, reporting and making recommendations to the Board on the development and implementation of the policies, standards and practices of the Company with respect to health, safety and environment. Its mandate includes (i) reviewing, and recommending to the Board for approval, fundamental policies pertaining to health, safety and environment; (ii) reviewing the Company's internal control systems, its strategies and policies regarding health, safety and environment; (iii) reviewing and reporting to the Board on the Company's performance with respect to health, safety and environment compliance, emerging trends in these areas and the results or findings of any reports or reviews pertaining to the Company; and (iv) investigating any activity of the Company that has an impact on health, safety or the environment. Trican's Vice President responsible for HSE matters is required to report to the HSE Committee on no less than a quarterly basis and to the full Board of Directors at least annually.

### **Environmental Protection**

Participants in the well services industry are subject to various environmental laws and regulations. These laws and regulations primarily govern the manufacture, processing, importation, transportation, handling and disposal of certain materials used in Trican's operations and may require extensive remediation or impose civil or criminal liability for violations. Trican's customers are subject to similar laws and regulations, as well as limits on emissions into the air and discharges into surface and sub-surface waters.

In addition to research currently being undertaken with respect to hydraulic fracturing, some regulatory authorities in the jurisdictions in which Trican operates, including the U.S. and Canada, have begun to introduce laws and regulations respecting the disclosure of chemicals utilized in hydraulic fracturing. In March 2011, the Fracturing Responsibility and Awareness of Chemicals Act bill was reintroduced in both the U.S. Senate and House of Representatives. The bills assert that hydraulic fracturing processes use chemicals that could affect drinking water supplies and would require the energy industry to publicly disclose the chemicals it mixes with the water and sand it pumps underground in the fracturing process. If these bills are ultimately successful, it could lead to operational delays and increased operating costs. In addition, the U.S. Environmental Protection Agency (EPA) has been conducting a national study on the potential impacts of hydraulic fracturing on drinking water resources. The EPA expects to release the final draft report for peer review and comment in 2014. The EPA has asserted federal regulatory authority over hydraulic fracturing involving diesel additives under the Safe Drinking Water Act's Underground Injection Control Program and has begun the process of drafting guidance documents related to this newly asserted regulatory authority. Such regulations could require the reporting and disclosure of chemicals used in the fracturing process to federal or state regulatory authorities, making such information publicly available if appropriate safeguards are not in place to protect confidential business information.

Other developments regarding environmental protection, including laws and regulations governing chemical usage, water discharges and waste management are starting to be introduced in certain jurisdictions, including the ban on oil and gas development and hydraulic fracturing. Some jurisdictions have addressed the levels of water usage for hydraulic fracturing by imposing suspensions on water withdrawals, implementing permitting programs, and requiring more reporting and monitoring; and have implemented restrictions on the proximity of fracturing to potable water sources, other surface waters, and aquifers. The adoption of any future federal or state laws or implementing regulations in the United States, or in other jurisdictions in which the Company carries on business, which impose reporting obligations on, or otherwise limiting the hydraulic fracturing process could make it more difficult for the Company to provide fracturing services for natural gas and oil wells and could have a material adverse impact on the Company's financial position and operating results.

### **Intellectual Property**

When providing services, we rely on trade secrets and know-how to maintain our competitive position and where appropriate, we undertake to protect our intellectual property by applying for patent protection. There are currently 76 patents issued to Trican that include: a specialized fracturing fluid, an unconventional hydraulic fracturing

method, an innovative multi-zone horizontal well fracturing method using coiled tubing completion tools, and a down hole coiled tubing tool to enhance jetting technology. There are also 145 patents pending. These pending patents include new fluid systems for fracturing, methods and tools related to well completion technology, multi-zone fracturing technology, coiled tubing technology for isolation tools and friction reduction, proppant and formation flow back prevention, unconventional gas production, and innovative cementing tool. We have also negotiated exclusive Canadian licenses to use new and innovative technologies in relation to our cementing services for pulsation technology, and coiled tubing services related to reverse circulation drilling as well as non-exclusive licenses to certain fracturing technologies.

### **Seasonality**

The well service industry is characterized by seasonality in Canada. The first calendar quarter is the most active in the well service industry, the second quarter is the least active, and the third and fourth quarters typically reflect increasing activity over the preceding quarter. During the second quarter when the frost leaves the ground, many secondary roads are temporarily rendered incapable of supporting the weight of heavy equipment resulting in restrictions in the level of well servicing activity. The duration of this period, commonly referred to as "spring break-up", has a direct impact on the level of our activities, particularly in Canada. Generally, the spring break-up period between March and May is the slowest period of activity for us.

During other periods of the year, rainfall can also render some of the secondary and oilfield service roads impassable for the Company's equipment. Additionally, if an unseasonably warm winter prevents sufficient freezing, Trican may not be able to access well sites. These factors can all reduce activity levels below normal or anticipated levels.

Activity levels in Russia and Australia are also impacted by seasonality, but to a lesser extent than Canada. Certain areas in Russia are subject to extreme cold temperatures during the winter months. If temperatures are colder than minus 35 degrees Celsius, our equipment is generally unable to operate. Conversely, our Russian operations can be impacted by the same "spring break-up" conditions that impact Canada as temperatures increase during the second quarter. Certain areas in Australia are subject to a rainy season which impacts access to job sites.

Activity levels in the U.S. are typically not impacted to the same extent by seasonality; however, activity levels can be impacted by cold weather during December and January.

### **Competitive Conditions**

The oilfield services market is highly competitive. The competitors in the well service market in Canada, Russia and the U.S. include Baker Hughes, Frac Tech, Halliburton Energy Services, Schlumberger Incorporated, and Calfrac Well Services Ltd. as well as other domestic companies in the markets in which we operate. Trican is one of the largest full service pressure pumping companies in Canada, based on equipment in the market, and offers a broader range of services than its Canadian-based competitors. Trican is currently one of the top ten pressure pumpers in the U.S. fracturing market and Trican Russia is currently one of the largest pressure pumping companies in Russia.

Trican is the only pressure pumping services company to make the list of Canada's Top 100 Corporate R&D Spenders in 2007, 2008, 2009, 2011, 2012, and 2013 for its industry leading commitment to technology and innovation. Trican is also recognized as an employer of choice, having been selected as one of Canada's Top 100 Employers in 2008, 2009, 2010, 2013, and 2014; one of Alberta's Top Employers for the past seven years; Canada's Top Family-Friendly Employers in 2008, 2009, 2010, 2013 and 2014; and one of Canada's Top Employers for Young people in 2010 and 2013. Trican is named to the Alberta Venture top employers list in 2010, 2011, 2012, and 2013; and the Alberta Venture highest grossing companies list for the past seven years.

### **New Products**

Trican's operational excellence is a product of our intense commitment to Research and Development. The energy industry evolves by way of new discoveries, by producers who pioneer new regions, by the public who demand an increased attentiveness, and by service companies who anticipate, respond and refine the equipment, tools and processes that make energy work.

In the past five years, Trican has developed more than 160 new cementing and stimulation products, 45 coiled tubing innovations, maintained 190 global patents and applications within 55 patent families, and authored over 35 technical papers. Trican applies a thorough understanding of our customers and their requirements to the development of our products, tools and procedures, while working to minimize their impact on the environment.

Through the skill and dedication of our more than 150 scientists, technicians and support staff working out of our Research and Development Centres in Calgary (Canada), The Woodlands (USA), and Moscow (Russia), we continue to discover new products and processes that enhance our service lines and respond to the needs of our customers and the industries to which we contribute.

One product that has recently gained significant market acceptance in Canada is our MVP Frac™ system. This system has been designed to reduce proppant settling that occurs during slick water fractures. The MVP Frac™ process fluidizes and suspends the sand, carrying it deeper and distributing it more effectively into the reservoir. This leads to a more effective proppant distribution across the fracture network, which enhances well production. During 2013, we fractured over 2900 stages using the MVP Frac™ system in Canada, compared to just over 300 stages in 2012.

### **Specialized Skill and Knowledge**

Trican's global R&D Centres (Calgary, The Woodlands, and Moscow) demonstrate Trican's commitment to continuously improving our value offering and competitiveness, to the benefit of our customers and their operations. These facilities contain state-of-the-art equipment that enables our scientists, engineers and technologists to maximize the quality and effectiveness of their work.

The work performed in our R&D Centre supports Trican's operations worldwide as products, technology and practices are developed for local implementation in all regions where we operate.

The R&D Centres house Trican's Stimulation and Cement laboratories, as well as the Coiled Tubing tool development facilities. Research, analysis and product development are cornerstones of Trican's growth and success, and our R&D Centres employ some of the most talented people in the industry, eager to innovate and contribute with their ideas and knowledge.

### **RISK FACTORS**

Our business is subject to a number of risks and uncertainties, some of which are summarized below. We encourage you to review and carefully consider the risks described below, as well as those described elsewhere in this report and in other publicly disclosed reports and materials. If any such risks were to materialize, our business, financial condition, results of operations, cash flows or prospects could be materially adversely affected. In turn, this could have a material adverse effect on the trading price of our securities. Additional risks and uncertainties not currently known to us or that we currently deem immaterial may also adversely affect our business and operations.

#### **Demand for Trican's services is dependent upon the level of expenditures in the oil and gas industry, which can be volatile.**

The demand, pricing and terms for Trican's services depend significantly upon the level of expenditures made by oil and gas companies on exploration, development and production activities. Expenditures by oil and gas companies are typically directly related to the demand for, and price of, oil and gas. Generally, when commodity prices and demand are, or are predicted to be, relatively high, demand for Trican's services is high. The converse is also true.

The prices for oil and natural gas are subject to a variety of factors including: the demand for energy; the ability of the Organization of Petroleum Exporting Countries ("OPEC") to set and maintain production levels for oil; oil and gas production by non-OPEC countries; political and economic uncertainty and socio-political unrest; cost of exporting, producing and delivering oil and gas; technological advances affecting energy consumption; and weather conditions. Any prolonged or substantial reduction in oil and natural gas prices would likely decrease the level of activity and expenditures in oil and gas exploration, development and production activities and, in turn, decrease the demand for Trican's services.

In addition to current and future oil and gas prices, the level of expenditures made by oil and gas companies are influenced by numerous factors over which the Company has no control, including but not limited to: weak general economic conditions; the cost of exploring for, producing and delivering oil and gas; the expected rates of current production; the discovery rates of new oil and gas reserves; cost and availability of drilling equipment; availability of pipeline and other oil and gas transportation capacity; North American natural gas storage levels; political, regulatory and economic conditions; taxation and royalty changes; government regulation; environmental regulation; ability of oil and gas companies to obtain credit, equity capital or debt financing; and movement of the Canadian dollar and Russian rouble relative to the U.S. dollar. A material decline in expenditures by oil and gas companies caused by a decrease in oil and gas prices or otherwise, could have a material adverse effect on Trican's business, financial condition, results of operations and cash flows. We may also be disadvantaged competitively and financially by a significant movement of exploration and production operations to areas of the world in which we are not currently active.

Additionally, during times of weak industry conditions, the risk of payment delays and failure to pay increases due to a reduction in customers' cash flow and challenges relating to their ability to access debt and equity markets among other factors.

**Trican's Canadian operations are susceptible to weather volatility.**

The well service industry is characterized by considerable seasonality in Canada, and to a lesser extent in Russia, the U.S., and Australia. During the second quarter when the frost leaves the ground, many secondary roads are temporarily rendered incapable of supporting the weight of heavy equipment resulting in severe restrictions in the level of well servicing activity. The duration of this period, commonly referred to as the "spring break-up", has a direct impact on the level of our activities, particularly in Canada. During other periods of the year, rainfall can also render some of the secondary and oilfield service roads impassable for the Company's equipment. Additionally, if an unseasonably warm winter prevents sufficient freezing, Trican may not be able to access well sites.

These factors can all reduce activity levels below normal or anticipated levels. Activity levels in Russia, the U.S. and Australia are typically not impacted to the same extent by seasonality.

**The oilfield services industry is highly competitive.**

We compete with multi-national, national and regional competitors in each of our current service lines in each of our geographic regions. Certain of our competitors may have financial, technical, manufacturing and marketing advantages in certain regions and may be in a stronger competitive position than Trican as a result.

Competitive actions taken by our competitors such as price changes, new product and technology introductions and improvements in availability and delivery could affect our market share or competitive position. To be competitive, we must demonstrate value for our customers by developing new technologies and providing reliable products and services. The intense competition within our industry could lead to a reduction in revenue or prevent us from successfully pursuing additional business opportunities.

In addition, certain foreign jurisdictions and government-owned petroleum companies have adopted policies or regulations, which may give local nationals in these countries a competitive advantage and which may impede our ability to expand into or to sustain a market share in such countries.

**Trican would be adversely affected should access to a credit facility or additional financing be unavailable to Trican or its customers.**

Trican's growth strategy is subject to the availability of additional financing for future costs of operations or expansion that may not be available, or may not be available on favourable terms. Trican's activities may also be financed partially or wholly with debt, which may increase its debt levels above industry standards. The level of Trican's indebtedness from time to time could impair its ability to obtain additional financing on a timely basis to take advantage of business opportunities that may arise. If the Company's cash flow from operations is not sufficient to fund its capital expenditure requirements, there can be no assurance that additional debt or equity financing will be available to meet these requirements or, if available, on favourable terms.

Furthermore, many of our customers access the credit markets to finance their oil and natural gas drilling activity. If the availability of credit to our customers is reduced, they may reduce their drilling and production expenditures, thereby decreasing demand for our products and services. Any such reduction in spending by our customers could adversely impact our operating results and financial condition.

**The loss of key customers could cause Trican's revenue to decline substantially.**

Trican has a number of key customers that, in aggregate, generate a significant portion of Trican's revenue. There can be no assurance that Trican's relationship with these customers will continue, and a significant reduction or total loss of the business from these customers, if not offset by sales to new or existing customers, would have a material adverse effect on the Company's business, financial condition, results of operations and cash flows.

**Failure to receive timely delivery of new equipment and parts from suppliers could adversely affect Trican's growth plans.**

The Company's ability to expand its operations and provide reliable service is dependent upon timely delivery of new equipment and replacement parts from fabricators and suppliers. During past periods of high industry activity, a shortage of skilled labour to build equipment coupled with high demand has placed a strain on some fabricators. If a similar strain occurs in the future, it could potentially increase the order time on new equipment and increase uncertainty surrounding final delivery dates. Significant delays in the arrival of new equipment from expected dates may constrain future growth and may have a material adverse effect on the financial performance of the Company.

**Trican is subject to various risks from its foreign operations.**

Some of Trican's current operations and related assets are located in Russia, Kazakhstan, Algeria, Australia, Norway, Saudi Arabia and Colombia. Further, Trican's growth plans may contemplate establishing operations in additional foreign countries where the political and economic systems may be less stable than those in North America. Operations in these countries may be subject to a variety of risks including, but not limited to: social unrest or civil war, currency fluctuations, devaluations and exchange controls; inflation; uncertain political and economic conditions resulting in unfavourable government actions such as unfavourable legislation or regulation, trade restrictions, nationalization, expropriation, unfavourable tax enforcement or adverse tax policies; the denial of contract rights; trade restrictions or embargoes imposed by other countries; restrictions on the repatriation of income or capital; and acts of terrorism, extortion, or armed conflict. If any of the risks described above materialize, it could reduce Trican's earnings and cash available for operations.

Further, government-owned oil companies located in some countries have adopted policies or are subject to governmental policies giving preference to the purchase of goods and services from companies that are majority-owned by local nationals. As a result, we may rely on joint ventures, license arrangements and other business combinations with local nationals in these countries. Activities in these countries may require protracted negotiation with host governments, national oil companies and third parties.

Our operations outside of Canada could also expose us to trade and economic sanctions or other restrictions imposed by the Canadian or other governments or organizations. Federal agencies and authorities may seek to impose a broad range of criminal or civil penalties against corporations or individuals for violations of securities laws, foreign corrupt practices laws or other federal statutes. If any of the above described risks materialize, it could materially impact Trican's operating results and financial condition.

Further, Trican is subject to various laws and regulations in the various jurisdictions in which it operates that govern the operation and taxation of its business. The imposition, application and interpretation of such laws and regulations can prove to be uncertain.

**An oversupply of oilfield service equipment could lead to a decline in the demand for Trican's services.**

Because of the long-life nature of oilfield service equipment and the lag between when a decision to build additional equipment is made and when the equipment is placed into service, the inventory of oilfield service equipment in the industry does not always correlate with the level of demand. Periods of high demand often result in increased capital

expenditures on equipment and those capital expenditures may add capacity that exceeds actual demand. This excess capacity could cause Trican's competitors to lower their prices and could lead to a decrease in prices in the oilfield services industry generally. Consequentially, Trican could fail to secure enough work in which to employ its equipment. This could have a material adverse effect on Trican's operating results and cash flows.

**Fluctuations in foreign currency exchange rates could adversely affect the Company.**

Trican's consolidated financial statements are presented in Canadian dollars. The reported results of our foreign subsidiary operations are affected by the movement in exchange rates primarily between the Canadian and United States dollar and Russian rouble. Trican's Canadian Operations include exchange rate exposure as purchases of some equipment and materials are from United States suppliers.

Trican entered into cross-currency swap agreements to hedge a portion of our U.S. dollar denominated outstanding private placement notes. Other than the swap agreements and natural hedges that arise from day-to-day operations, the Company does not maintain an active hedge program for foreign exchange exposure.

**Business acquisitions entail numerous risks and may disrupt Trican's business or distract management attention.**

As part of Trican's business strategy, it will continue to consider and evaluate acquisitions of, or significant investments in, complementary businesses and assets. Any acquisition that Trican completes could have unforeseen and potentially material adverse effects on the Company's financial position and operating results.

**Acquisitions involve numerous risks, including:**

- unanticipated costs and liabilities;
- difficulty of integrating the operations and assets of the acquired business;
- the ability to properly access and maintain an effective internal control environment over an acquired company;
- potential loss of key employees and customers of the acquired company; and
- an increase in expenses and working capital requirements.

Trican may incur substantial indebtedness to finance acquisitions and also may issue equity securities in connection with any such acquisitions. Trican will be required to meet certain financial covenants in order to borrow money under its credit agreements to fund acquisitions. Debt service requirements could represent a significant burden on the Company's results of operations and financial condition and the issuance of additional equity could be dilutive to shareholders. Acquisitions could also divert the attention of management and other employees from Trican's day-to-day operations and the development of new business opportunities. In addition, Trican may not be able to continue to identify attractive acquisition opportunities or successfully acquire identified targets.

**Failure to adequately protect its intellectual property could adversely impact Trican's business.**

Trican's success depends in part on our proprietary technology. We rely on a combination of patent, copyright, trademark and trade secret laws, confidentiality provisions and licensing arrangements to establish and protect our proprietary rights. Trican's business may be adversely affected if it fails to obtain patents, its patents are unenforceable, the claims allowed under its patents are not sufficient to protect its technology or its trade secrets are not adequately protected. Trican's competitors may be able to develop similar technology independently that is similar or superior to our technology, or may duplicate or reverse engineer our technology or design around the patents owned or licensed by Trican.

Furthermore, if any of our competitors obtain patents over valuable intellectual property, Trican may be unable to offer certain services in certain jurisdictions, may be forced to use less effective or costlier alternative technology, or be required to enter into costly licensing agreements.

**Trican's business is affected by governmental regulations and policies.**

Trican's operations, and those of its customers, are subject to a variety of federal, provincial, state and local laws, regulations and guidelines, including laws and regulations related to health and safety, the conduct of operations, the manufacture, management, transportation and disposal of certain materials used in its operations. Trican believes it is in compliance with such laws and regulations and has invested financial and managerial resources to ensure such compliance. Such expenditures historically have not been material to Trican. However, because such laws and regulations are subject to change it is impossible for Trican to predict the cost or impact of such laws and regulations on its future operations, nor their impact on its customers' activities and thereby on the demand for its services.

**Trican's operations are subject to inherent hazards which may not be covered by insurance.**

Trican's operations are subject to hazards inherent in the oil and gas service industry, such as equipment defects, damage, loss, malfunctions and failures, and natural disasters which may result in fires, vehicle accidents, explosions and uncontrollable flows of natural gas or well fluids that can cause personal injury, loss of life, suspension of operations, damage to formations, damage to facilities, business interruptions, and damage to or destruction of property and equipment. These hazards could expose Trican to liability for personal injury, wrongful death, product liability, property damage and other environmental damages. Trican continuously monitors its activities for quality control and safety and maintains insurance coverage it believes to be adequate and customary in the industry. Additionally, Trican seeks to obtain indemnification from its customers by contract for certain of the above risks. However, such insurance and indemnities may not be adequate to cover Trican's liabilities and may not be available in the future at rates Trican considers reasonable and commercially justifiable. If the Company were to incur substantial liability and such damages were not covered by insurance or were in excess of policy limits, or if the Company were to incur such liability at a time when it is not able to obtain liability insurance, its business, financial condition, results of operations and cash flow could be materially adversely affected.

**Compliance with various environmental laws, rules, legislation and guidelines could impose greater costs on Trican's business or lead to a decline in the demand for services.**

Participants in the well services industry are subject to various environmental laws and regulations. These laws and regulations primarily govern the manufacture, processing, importation, transportation, handling and disposal of certain materials used in Trican's operations and may require extensive remediation or impose civil or criminal liability for violations. Trican's customers are subject to similar laws and regulations. Industry participants are also subject to limits on emissions into the air and discharges into surface and sub-surface waters.

Recent regulatory initiatives have been undertaken in various jurisdictions to address assertions that hydraulic fracturing processes use chemicals that could affect drinking water supplies. Legislation has been enacted in some jurisdictions and is being proposed in others that require the energy industry to publicly disclose the chemicals it mixes with water and sand it pumps underground in the fracturing process. These actual and proposed legislative changes could lead to delays and increased operating costs. The adoption of any future federal or state laws or implementing regulations in Canada and/or the United States, or in other jurisdictions in which the Company carries on business, which impose reporting obligations on, or otherwise limit the hydraulic fracturing process could reduce demand for pressure pumping services or make it more difficult for the Company to provide fracturing services for natural gas and oil wells and could affect the Company's ability to utilize proprietary technological developments to compete effectively in the pressure pumping industry. This could have a material adverse impact on the Company's financial position and operating results.

**Stringent regulation of fracturing services could have a material adverse impact on the Company's financial position and operating results.**

Trican is subject to increasingly stringent environmental laws and regulations, some of which may provide for strict liability for damages to natural resources or threats to public health or safety. While Trican maintains liability insurance, the insurance is subject to coverage limits and may exclude coverage for damage resulting from environmental contamination. There can be no assurance that insurance will continue to be available to Trican on commercially reasonable terms, that the possible types of environmental liability will be covered by insurance or that the dollar amount of such liabilities will not exceed Trican's policy limits. Even a partially insured claim, if

successful and of sufficient magnitude, could have a material adverse effect on Trican's business, results of operations and prospects.

Future regulatory developments could have the effect of reducing industry activity. Trican cannot predict the nature of the restrictions that may be imposed. Increase in production in the oil and gas industry from unconventional sources has raised concerns over hydraulic fracturing and seismic-related services, which may result in increased regulation. Regulatory approval processes for oil and gas exploration and development activities, including the scope of regulatory oversight and permitting and approval requirements, and the time it takes to receive necessary permits and applicable regulatory approvals could be slowed or unfavorable due to the influence from the evolving role of activists and their impact on public opinion and government policy related to energy development projects and the utilization of hydraulic fracturing technology and processes in particular. The adoption of future federal, state, local or foreign laws or implementing regulations imposing reporting obligations on, or limiting or banning, the hydraulic fracturing process could make it more difficult to complete natural gas or oil wells and could have a material adverse effect on Trican's liquidity, consolidated results of operations, and consolidated financial condition. Trican may be required to increase operating expenses or capital expenditures in order to comply with any new restrictions or regulations. Such expenditures could be material.

We are also aware that some countries, provinces, states, counties and municipalities have enacted or are considering moratoria on hydraulic fracturing. Additionally, Trican's business could be affected by a moratorium on related operations, such as sand mining, which provides proppant, a key input for our hydraulic fracturing operations. It is not possible to estimate how these various restrictions could affect Trican's operations.

**Failure to maintain Trican's safety standards and record could lead to a decline in the demand for services.**

Standards for the prevention of incidents in the oil and gas industry are governed by service company safety policies and procedures, accepted industry safety practices, customer specific safety requirements and health and safety legislation. In order to ensure compliance, Trican has developed and implemented safety and training programs, which it believes meet or exceed the applicable standards. A key factor considered by customers in retaining oilfield service providers is safety. Deterioration of Trican's safety performance could result in a decline in the demand for Trican's services and could have a material adverse effect on its revenues, cash flows and profitability.

**Trican may be subject to litigation, contingent liabilities and potential unknown liabilities.**

From time to time, Trican is subject to costs and other effects of legal and administrative proceedings, settlements, reviews, claims and actions. Trican may in the future be involved in disputes with other parties which could result in litigation or other actions, proceedings or related matters. Furthermore, there may be unknown liabilities assumed by Trican in relation to prior acquisitions or dispositions as well as environmental or tax issues. The discovery of any material liabilities could have an adverse effect on Trican's financial condition and results.

The results of litigation or any other proceedings or related matters cannot be precisely predicted due to uncertainty as to the final outcome. Trican's assessment of the likely outcome of these matters is based on its judgement of a number of factors including past history, precedents, relevant financial and other evidence and facts specific to the matter as known at the time of the assessment.

**Trican may be subject to litigation if another party claims that we have infringed upon its intellectual property rights.**

The tools, techniques, methodologies, programs and components Trican uses to provide services may infringe upon the intellectual property rights of others. Infringement claims generally result in significant legal and other costs and may distract management from running our core business. Royalty payments under licenses from third parties, if available, would also increase Trican's costs. If a license was not available, Trican might not be able to continue providing a particular service or product, which could adversely affect Trican's financial condition, results of operations and cash flows. Additionally, developing non-infringing technologies would increase Trican's costs.

**Trican may be adversely impacted by a shortage of qualified personnel.**

Trican requires highly skilled personnel to operate and provide technical services and support for its business. Competition for the personnel required for its businesses intensifies as activity increases. Trican's ability to manage the costs associated with recruiting, training and retention of a highly skilled workforce could impact its business. In periods of high utilization it may become more difficult to find and retain qualified individuals. This could increase Trican's costs or have other adverse effects on its operations.

**There are certain risks associated with Trican's dependence on third-party suppliers.**

Trican sources raw materials, such as oilfield cement, proppant, guar, nitrogen, carbon dioxide and coiled tubing, from a variety of suppliers, most of whom are located in Canada, Russia and the United States. Alternate suppliers exist for all raw materials. The source and supply of materials has been consistent in the past; however, in periods of high industry activity, Trican has occasionally experienced periodic shortages of certain materials. In addition, in periods of low activity, there is a risk that Trican's key suppliers are in financial distress and may not be able to provide the products required. Management maintains relationships with a number of suppliers in an attempt to mitigate this risk. However, if the current suppliers are unable to provide the necessary materials, or otherwise fail to deliver products in the quantities required, any resulting delays in the provision of services to Trican's clients could have a material adverse effect on its results of operations and financial condition.

Trican may also have prepaid deposits with suppliers relating to inventory or property and equipment. The recoverability of these prepayments are subject to the financial health of the relevant suppliers.

**Merger and acquisition activity may reduce the demand for Trican's services.**

Merger and acquisition activity in the oil and gas exploration and production sector may constrain demand for the Company's services as customers focus on reorganizing the business prior to committing funds to exploration and development projects. Further, the acquiring company may have preferred supplier relationships with oilfield service providers other than Trican.

**New technology could place Trican at a disadvantage versus competitors.**

The ability of the Company to meet customer demands in respect of performance and cost will depend upon continuous improvements in operating equipment. There can be no assurance that the Company will be successful in its efforts in this regard or that it will have the resources available to meet this continuing demand. Failure by Trican to do so could have a material adverse effect on the Company's business, financial condition, results of operation and cash flows. No assurances can be given that competitors will not achieve technological advantages over the Company.

**Operations with independent third parties could create uncertainty.**

Trican conducts some operations whereby control may be shared with unaffiliated third parties. Although Trican currently has a controlling interest in such arrangements, differences in views among participants may result in delayed decisions or in failures to agree on major issues. Trican may enter into similar arrangements as we pursue additional opportunities. Although the Company has not been constrained by our participation in such arrangements to date, no assurance can be given that the actions or decisions of third parties will not affect our business in a way that hinders our operations.

**Possible failure to realize anticipated benefits of acquisitions.**

Trican has completed acquisitions and may complete additional acquisitions to strengthen its position in its industry and to create opportunity to realize certain benefits, including, among other things, potential cost savings. Achieving the benefits of any future acquisitions depends, in part, on successfully consolidating functions and integrating operations, procedures and personnel in a timely and efficient manner, as well as Trican's ability to realize the anticipated growth opportunities and synergies from combining the acquired businesses and operations with its own. The integration of acquired businesses requires the dedication of substantial management effort, time and resources

which may divert management's focus and resources from other strategic opportunities and from operational matters during this process. The integration process may result in the loss of key employees and the disruption of ongoing business, customer and employee relationships that may adversely affect Trican's ability to achieve the anticipated benefits of these future acquisitions.

**Improper access to confidential information could harm Trican's reputation.**

Trican's efforts to protect our confidential information, as well as the confidential information of our customers, may be unsuccessful due to the actions of third parties, software bugs or other technical malfunctions, employee error or malfeasance, or other factors. If any of these events occur, this information could be accessed or disclosed improperly. Any incidents involving unauthorized access to confidential information could damage our reputation and diminish our competitive position. In addition, the affected customers could initiate legal or regulatory action against us in connection with such incidents, which could cause Trican to incur significant expense. Any of these events could have a material and adverse effect on the Company's business, reputation, or financial results.

**Ability to pay dividends**

The payment of dividends is at the discretion of our Board. All dividends will be reviewed by the Board and may be increased, reduced or suspended from time to time. Our ability to pay dividends and the actual amount of such dividends is dependent upon, among other things, our financial performance, our debt covenants and obligations, our ability to refinance our debt obligations on similar terms and at similar interest rates, our working capital requirements, our future tax obligations, our future capital requirements, the satisfaction of applicable solvency tests in the *Business Corporations Act* (Alberta) and the risk factors set forth in this report.

**DIVIDEND RECORD AND POLICY**

On May 3, 2006, Trican's Board of Directors resolved to commence semi-annual dividend payments to holders of Common Shares. The first dividend payment of \$0.05 per share was paid on July 15, 2006. The Company has since made semi-annual dividend payments in January and July of each subsequent year, each of \$0.05 per share. Effective February 28, 2012, Trican's Board of Directors approved an increase to its semi-annual dividend from \$0.05 to \$0.15 per share, thereby increasing the annual dividend to \$0.30 per share. The most recent payment was made on January 14, 2014. Dividend payments are made at the discretion of the Board of Directors and depend on the financial condition of the Company as well as other factors. Currently it is not anticipated that there will be a change in the Company's dividend policy.

**DESCRIPTION OF CAPITAL STRUCTURE**

Trican is authorized to issue an unlimited number of Common Shares and an unlimited number of preferred shares, issuable in series. No preferred shares are issued and outstanding. All of the outstanding Common Shares are fully paid and non-assessable. The Common Shares rank junior to the preferred shares.

**Common Shares**

Subject to the provisions of the *Business Corporations Act* (Alberta), the holders of Common Shares are entitled to receive notice of, to attend and vote at, all meetings of holders of Common Shares and are entitled to one vote, in person or by proxy, for each Common Share held.

Subject to the preferences given to the holders of preferred shares, the holders of Common Shares are entitled to receive such dividends as may be declared by the Board of Directors.

On the liquidation, dissolution or winding-up of Trican, whether voluntary or involuntary, the holders of the Common Shares will be entitled to receive pro rata all of the assets remaining for distribution after the payment to the holders of the preferred shares, in accordance with the preference or liquidation, dissolution or winding-up accorded to the holders of preferred shares.

## Preferred Shares

The rights and privileges of each series of preferred shares would be established by our Board of Directors prior to their issuance. No preferred shares are outstanding.

In the event of the liquidation, dissolution or winding-up of Trican, whether voluntary or involuntary, the holders of each series of preferred shares would be entitled, in priority to the holders of Common Shares and any other shares of Trican ranking junior to the preferred shares on a distribution of capital, to be paid ratably with the holders of each other series of preferred shares the amount, if any, specified as being payable preferentially to the holders of such series on a distribution of capital of Trican.

The holders of each series of preferred shares would also be entitled, in priority to the holders of Common Shares and any other shares of Trican ranking junior to the preferred shares with respect to the payment of cumulative dividends, to be paid rateably with the holders of each other series of preferred shares, the amount of cumulative dividends, if any, specified as being payable preferentially to the holders of such series.

## Senior Unsecured Notes

On November 19, 2012, Trican issued U.S. \$50 million in senior unsecured notes. These notes have a seven-year maturity, five-year average term, and a coupon of 4.05% payable semi-annually on May 19 and November 19. These notes are unsecured and rank equally with Trican's bank facilities and other outstanding senior notes.

On April 28, 2011, Trican announced the closing of its private placement of senior unsecured notes (the "Notes"). The Notes are unsecured and rank equally with Trican's bank facilities and other outstanding senior notes. The following outlines the key terms of the new Notes:

- Canadian \$45 million Series C Senior Notes maturing April 28, 2016, bearing interest at a fixed rate of 5.22% payable semi-annually on April 28 and October 28;
- Canadian \$15 million Series D Senior Notes maturing April 28, 2021, bearing interest at a fixed rate of 6.11% payable semi-annually on April 28 and October 28;
- U.S. \$65 million Series E Senior Notes maturing April 28, 2016, bearing interest at a fixed rate of 4.61% payable semi-annually on April 28 and October 28;
- U.S. \$80 million Series F Senior Notes maturing April 28, 2018, bearing interest at a fixed rate of 5.29% payable semi-annually on April 28 and October 28; and
- U.S. \$105 million Series G Senior Notes maturing April 28, 2021, bearing interest at a fixed rate of 5.90% payable semi-annually on April 28 and October 28.

On June 21, 2007, Trican entered into an agreement with institutional investors in the U.S. providing for the issuance, by way of private placement, of U.S. \$100 million of Senior Unsecured Notes (the "Notes") in two tranches:

- U.S. \$25 Million Series A Senior Notes maturing June 22, 2012, bearing interest at a fixed rate of 6.02% payable semi-annually on June 22 and December 22. This first tranche was repaid by Trican on June 22, 2012;
- U.S. \$75 Million Series B Senior Notes maturing June 22, 2014, bearing interest at a fixed rate of 6.10% payable semi-annually on June 22 and December 22.

## MARKET FOR SECURITIES

Our Common Shares are listed and posted for trading on the Toronto Stock Exchange ("TSX") under the symbol "TCW". The following table sets forth the monthly price range and trading volume of the Common Shares for 2013, as reported by the TSX for the periods indicated.

<b>Period</b>	<b>High</b>	<b>Low</b>	<b>Volume</b>
January	13.95	12.56	12,171,201
February	15.42	12.59	21,913,661
March	15.01	13.12	15,152,462
April	14.90	12.48	8,840,887
May	14.70	12.70	8,174,201
June	16.23	13.95	11,942,572
July	15.23	13.59	11,024,872
August	15.80	14.10	7,812,071
September	15.90	13.56	8,787,041
October	14.69	13.31	9,247,097
November	14.90	12.06	12,058,181
December	13.08	11.97	8,529,672

### **DIRECTORS AND OFFICERS**

The names, province and country of residence, positions with the Company, and principal occupation of the current directors and executive officers of the Company are set out below and in the case of directors, the period each has served as a director of the Company. Our directors hold office until the next annual general meeting of our shareholders or until each director's successor is appointed or elected pursuant to the *Business Corporations Act* (Alberta).

<b>Name and Province or State and Country of Residence</b>	<b>Position Held</b>	<b>Principal Occupation during the last 5 years</b>	<b>Director Since</b>
Murray L. Cobbe Alberta, Canada	Chairman	Retired executive  Murray Cobbe has been a director of Trican since September 20, 1996 and Chairman since January 1, 2012. From August 1, 2009 until December 31, 2011 he served as Executive Chairman. Prior to that date he was President and Chief Executive Officer of Trican, positions that he had held since September 1996.	Sept. 20, 1996
Dale M. Dusterhoft Alberta, Canada	Chief Executive Officer	Chief Executive Officer of the Company  Mr. Dusterhoft is a director and was appointed our Chief Executive Officer on August 1, 2009. From February 2008 to August 2009, Mr. Dusterhoft served as Senior Vice President. From April 1998 to February 2008, Mr. Dusterhoft served as Vice President, Technical Services. Mr. McKee has a Bachelor of Commerce degree from the University of Calgary, and is a member of the Chartered Accountants of Alberta.	-

**Notes:**

- (1) Member of the Audit Committee.
- (2) Member of the Compensation Committee.
- (3) Member of the Corporate Governance Committee.
- (4) Member of the Health, Safety and Environment Committee.
- (5) Until February 21, 2010, Mr. Brooks was a director of Turnkey E&P Inc. ("**Turnkey**"), which is incorporated under the laws of Alberta and which formerly traded on the NEX board of the Toronto Stock Exchange ("**TSX**"). On November 17, 2008, Turnkey's principal operating subsidiary in the United States filed for protection under Chapter 11 of the United States Bankruptcy Code. On June 8, 2010, Turnkey was delisted from the NEX. In addition, Turnkey is the subject of a cease trade order by the Alberta Securities Commission on December 14, 2009, and by other securities commissions in Canada subsequent to that date for failing to file interim unaudited financial statements, interim management discussion and analysis and certification of interim filings for the interim period ended September 30, 2009. Such cease trade orders are still in effect as of the date hereof.
- (6) Mr. Robinson is a director of Desmarais Energy Corporation ("**Desmarais**"), which is incorporated under the laws of Alberta and trades on the TSX Venture Exchange under the symbol "DES". On November 18, 2011, Desmarais filed a proposal under the *Bankruptcy and Insolvency Act (Canada)* respecting the restructuring of its financial affairs (the "**Proposal**"). On December 9, 2011, the Court of Queen's Bench of Alberta approved the Proposal, which was also approved at a meeting of unsecured creditors on December 8, 2011. Desmarais completed the terms of the Proposal on February 6, 2012.
- (7) Mr. Bagan is and has been since December, 2012, a director of Canadian Oilfield Solutions which is incorporated under the laws of Alberta and trades on the TSX-V under the symbol "OTS". Canadian Oilfield Solutions filed its interim financial reports and Management's discussion and analysis as at and for the interim periods March 31, 2012, June 30, 2012, and September 30, 2012 (the "2012 Interim Filings"). On April 24, 2013, Canadian Oilfield Solutions issued a press release stating that certain of its reported gross revenues and cost of sales from its Mexican construction business were more appropriately combined and reported as net revenue. Canadian Oilfield Solutions advised that as a result of this error, the presentation of gross revenue and cost of sales, individually, as presented in the 2012 Interim Filings, should not be relied on. On April 25, 2013, the Alberta Securities Commission issued a cease trade order against Canadian Oilfield Solutions for failing to comply with Alberta securities law filing requirements. On April 26, 2013, the TSX-V suspended the trading of Canadian Oilfield Solutions' common shares. On May 17, 2013 the British Columbia Securities Commission issued a reciprocal cease trade order against Canadian Oilfield Solutions for failing to file its 2012 Interim Filings in accordance with British Columbia securities law filing requirements. Such cease trade orders are no longer in effect.

We do not have an executive committee of our Board of Directors.

As at March 17, 2014, our directors and executive officers, as a group, beneficially owned, or controlled or directed, directly or indirectly, 2,234,773 of our Common Shares, or approximately 1.5% of the issued and outstanding Common Shares. In addition, as at March 17, 2014 our directors and executive officers, as a group, have outstanding options to purchase 3,208,300 Common Shares under our stock option plan and our outside directors held 378,369 deferred share units. As at March 17, 2014, our executive officers held 523,646 performance share units.

**Conflicts of Interest**

Circumstances may arise where members of our Board of Directors or our officers are directors or officers of corporations or other entities which are in competition to our interests. No assurances can be given that opportunities identified by such board members or officers will be provided to us. Pursuant to the *Business Corporations Act* (Alberta), a director or officer of a corporation who is a party to a material contract or proposed material contract with that corporation or is a director or an officer of or has a material interest in any person who is a party to a material contract or proposed material contract with that corporation shall disclose to the corporation the nature and extent of the director's or officer's interest. In addition, a director shall not vote on any resolution to approve a contract of the nature described except in limited circumstances.

Our management is not aware of any existing or potential material conflicts of interest between us or a subsidiary of us and one of our directors or officers or of one of our subsidiaries.

## AUDIT COMMITTEE INFORMATION

The Audit Committee of the Board of Directors operates under a written Mandate & Terms of Reference that sets out its responsibilities and composition requirements. A copy of the Mandate & Terms of Reference is attached as Schedule "A" to this Annual Information Form. As at the effective date of this Annual Information Form, the members of the Audit Committee were: Kevin Nugent (chair), Kenneth Bagan and Allen Brooks, each of whom is financially literate and independent. The following sets out the education and experience of each director relevant to the performance of his duties as a member of the Committee:

**Kevin Nugent** is chair of the Audit Committee. He is a chartered accountant and has held various senior financial positions with public companies. He has held the positions of Chief Executive Officer and Chief Financial Officer in public oil and gas service companies. Mr. Nugent is also currently a director of Savanna Energy Services Corp. (a publicly traded drilling and service rig provider) and Secure Energy Services Inc. (a publicly traded oilfield waste management company).

**Kenneth Bagan** is an independent businessman. He has been President of a publicly traded company and has held various senior positions requiring regular review of financial statements.

**G. Allen Brooks** has had a 40-year career in the energy and investment industries as an energy securities analyst, an oilfield service company manager, a consultant to energy company managements and a member of the board of directors of Pason Systems Corp. and Savanna Energy Services Corp. Mr. Brooks currently serves as an advisor to PPHB LP, a boutique oilfield service investment banking firm. He is also a Governance Fellow of the National Association of Corporate Directors, and a member of the Institute of Corporate Directors.

The Audit Committee Mandate & Terms of Reference requires all members to be financially literate. Financially literate means the ability to read and understand financial statements that present a breadth and level of complexity of accounting issues that are generally comparable to the breadth and complexity of the issues that can reasonably be expected to be raised by our financial statements. The Board of Directors believes that all of the current members of the Audit Committee are financially literate.

In addition, the Committee charter contains independence requirements applicable to each member and each member currently meets those requirements in addition to the independence requirement set out in National Instrument 52-110 *Audit Committees*.

The Audit Committee has adopted policies and procedures with respect to the pre-approval of audit and permitted non-audit services to be provided by the auditors of Trican, currently KPMG LLP. Any such services must be permitted services and must be pre-approved by the Audit Committee pursuant to this policy. The Audit Committee must also pre-approve the audit services and the fees to be paid.

The following table discloses fees billed to us by our auditors, KPMG LLP during the past 2 years.

<b>Type of Service Provided</b>	<b>2013</b>	<b>2012</b>
Audit and Audit-Related Fees <sup>(1)</sup>	\$750,500	\$625,500
Tax Fees <sup>(2)</sup>	183,325	197,000
Total	\$933,825	\$822,500

**Notes:**

- (1) Audit and audit-related fees consist of fees for the audit or review of the Company's annual and quarterly financial statements or services that are normally provided in connection with statutory and regulatory filings or engagements and fees for assurance and related services that are reasonably related to the performance of the audit or review of the Company's financial statements.
- (2) Tax fees are considered non-audit fees and consist of tax advice and review of tax returns.

## **LEGAL PROCEEDINGS**

There are no legal proceedings to which Trican or any of its subsidiaries is, a party or that any of their property is, or was during 2013, the subject of, during 2013 that are anticipated to be material to the Company, nor is the Company aware of any contemplated or pending proceedings that might be material.

## **INTEREST OF MANAGEMENT AND OTHERS IN MATERIAL TRANSACTIONS**

None of our directors or executive officers, nor any shareholder who beneficially owns, or controls or directs, directly or indirectly, more than 10% of the outstanding Common Shares, nor any known associate or affiliate of such persons, had a material interest, direct or indirect, in any transaction within the last three fiscal years nor in any proposed transaction that has materially affected or is reasonably expected to materially affect us.

## **TRANSFER AGENT AND REGISTRAR**

Computershare Trust Company of Canada, at its principal offices in Calgary, Alberta and Toronto, Ontario is the transfer agent and registrar of our Common Shares.

## **MATERIAL CONTRACTS**

Except for contracts entered into in the ordinary course of business, there were no material contracts entered into by the Company within the most recently completed financial year, or before the most recently completed financial year, and which are still in effect.

## **INTERESTS OF EXPERTS**

The only person or company whose profession or business gives authority to a statement made by such person or company and who is named as having prepared or certified a report, valuation, statement or opinion described or included in a filing, or referred to in a filing, made under National Instrument 51-102 by us during, or related to, our most recently completed financial year is KPMG LLP, our auditors. KPMG LLP has confirmed to us that it is independent of us in accordance with the relevant rules and related interpretation prescribed by the Institute of Chartered Accountants of Alberta. As at the date of this Annual Information Form, KPMG LLP and its partners did not hold any registered or beneficial interests, directly or indirectly, in our securities or the securities of any of our associates or affiliates.

## **ADDITIONAL INFORMATION**

Additional information, including directors' and officers' remuneration and indebtedness, principal holders of our securities and securities authorized for issuance under equity compensation plans, is contained in our information circular for our most recent annual meeting of security holders that involved the election of directors. Additional financial information is contained in our consolidated financial statements for the year ended December 31, 2013, and the Management's Discussion and Analysis dated February 25, 2014.

The aforementioned documents, as well as additional information relating to the Company, can be found on SEDAR at [www.sedar.com](http://www.sedar.com).

**SCHEDULE A****MANDATE & TERMS OF REFERENCE OF THE AUDIT COMMITTEE****Role and Objectives**

The Audit Committee (the "Committee") is a committee of the board of directors (the "Board") of Trican Well Service Ltd. (the "Corporation") to which the Board has delegated its responsibility for oversight of the nature and scope of the annual audit, management's reporting on internal accounting standards and practices, financial information and accounting systems and procedures, financial reporting and statements and recommending, for board of director approval, the audited financial statements and other mandatory disclosure releases containing financial information. The objectives of the Committee are as follows:

1. To assist directors in meeting their responsibilities (especially for accountability) in respect of the preparation and disclosure of the Corporation's financial statements and related matters;
2. To provide better communication between directors and external auditors;
3. To enhance the external auditors' independence;
4. To increase the credibility and objectivity of financial reports;
5. To monitor the performance and ensure the effectiveness of the Corporation's internal audit function; and
6. To strengthen the role of the outside directors by facilitating in depth discussions between directors on the Committee, management and external auditors.

**Membership of the Committee**

1. The Committee shall be comprised of three members or such greater number as the Board may from time to time determine, all of whom shall be independent (in accordance with the definition of "independent" set out in Multilateral Instrument 52-110 – Audit Committees).
2. The Board shall designate one of the members of the Committee, who shall be unrelated, to be the Chair of the Committee.
3. All of the members of the Committee shall be "financially literate" (in accordance with the definition of "financial literacy" set out in MI 52-110.)
4. The Secretary to the Board shall act as Secretary to the Committee.

**Mandate and Responsibilities of the Committee**

1. In addition to any other duties and authorities delegated to it by the Board from time to time, the Committee will have the authority and responsibility for:
  - (a) overseeing the work of the external auditors, including resolution of disagreements between management and the external auditors regarding financial reporting;
  - (b) satisfying itself on behalf of the Board that the Corporation's internal control systems and disclosure control systems are satisfactory and operating effectively;
  - (c) reviewing the Corporation's annual financial statements prior to their submission to the Board for approval, including without limitation the following:
    - i. reviewing changes in accounting principles, or in their application, which may have a material impact on the current or future years' financial statements;
    - ii. reviewing significant accruals or other estimates;
    - iii. reviewing accounting treatment of unusual or non-recurring transactions;

- iv. ascertaining compliance with covenants under loan agreements;
  - v. reviewing disclosure requirements for commitments and contingencies;
  - vi. reviewing adjustments proposed by the external auditors, whether or not included in the financial statements;
  - vii. reviewing unresolved differences between management and the external auditors; and
  - viii. obtaining explanations of significant variances with comparative reporting periods and budgets/forecasts.
- (d) reviewing, and making a recommendation to the Board with respect to their approval of, the financial statements, prospectuses, management discussion and analysis (“MD&A”), annual information forms (“AIF”) and all public disclosure containing audited or unaudited financial information before release and prior to board approval;
- (e) satisfying itself that adequate procedures are in place for the review of the Corporation's disclosure of all other financial information and periodically assessing the accuracy of those procedures;
- (f) with respect to the appointment of external auditors by the Board:
- i. recommending to the Board the appointment of the external auditors;
  - ii. recommending to the Board the terms of engagement of the external auditors, including the compensation of the auditors and a confirmation that the external auditors shall report directly to the Committee;
  - iii. reviewing annually with the external auditors their plan for their audit;
  - iv. reviewing and approving any non-audit services to be provided by the external auditors' firm and considering the impact on the independence of the auditors; and
  - v. when there is to be a change in auditors, reviewing the issues related to the change and the information to be included in the required notice to securities regulators of such change.
- (g) Reviewing with external auditors and the internal auditor their assessment of the internal controls of the Corporation, their written reports containing recommendations for improvement and management's response and follow-up to any identified weaknesses;
- (h) Upon the external auditors' completion of the audit, reviewing the external auditors' reports upon the financial statements of the Corporation and its subsidiaries;
- (i) With respect to the internal audit function:
- i. reviewing the performance and independence of the internal audit function and whether internal audit has had full access to the Corporation's books, records and personnel;
  - ii. ensuring that the senior internal audit executive has access to the chair of the Committee, the Chief Executive Officer and the Chief Financial Officer;
  - iii. reviewing with input from the Chief Financial Officer, and approving, the proposed annual internal audit plan including assessment of major risks, areas of focus, responsibilities and objectives and staffing;

- iv. approve all elements of compensation for the senior internal audit executive;
  - v. receiving periodic reports from internal audit addressing: (1) progress on the annual internal audit plan, including any significant changes to it; (2) significant internal audit findings, including issues as to the adequacy of internal control over financial reporting and any procedures implemented in light of significant control deficiencies; and (3) any significant internal fraud issues;
  - vi. reviewing the mandate, budget plan, changes in the scope of the internal audit plan, activities, organizational structure and qualifications of the internal audit department, as needed;
  - vii. reviewing the appointment, performance, replacement or dismissal of the senior internal audit executive;
  - viii. reviewing significant reports prepared by the internal audit department together with management's response and follow-up to these reports; and
  - ix. reporting to the Board on any significant issues relating to the internal audit function.
- (j) establishing a procedure for the handling of whistleblower complaints which procedure shall include provisions for:
- i. the receipt, retention and treatment of complaints received by the Corporation regarding accounting, internal accounting controls or auditing matters; and
  - ii. the confidential, anonymous submission by employees of the Corporation of concerns regarding questionable accounting or auditing matters.
- (k) reviewing and approving the Corporation's hiring policies regarding employees and former employees of the present and former external auditors of the Corporation;
- (l) investigating any financial activity of the Corporation (with which investigations all employees of the Corporation shall cooperate as requested by the Committee); and
- (m) retaining, as it determines appropriate, persons having special expertise and/or obtaining independent professional advice to assist in filling their responsibilities at the expense of the Corporation and without any further approval of the Board.

#### **Meetings and Administrative Matters**

1. At all meetings of the Committee every question shall be decided by a majority of the votes cast. In case of an equality of votes, the Chair of the meeting shall not be entitled to a second or casting vote.
2. The Chair will preside at all meetings of the Committee, unless the Chair is not present, in which case the members of the Committee that are present will designate from among such members the Chair for the purposes of the meeting.
3. A quorum for meetings of the Committee will be a majority of its members, and the rules for calling, holding, conducting and adjourning meetings of the Committee will be the same as those governing the Board unless otherwise determined by the Committee or the Board.
4. Meetings of the Committee should be scheduled to take place at least four times per year and at such other times as the Chair of the Committee may determine.
5. Agendas, approved by the Chair, will be circulated to Committee members along with background information on a timely basis prior to the Committee meetings.

6. The Committee may invite such officers, directors and employees of the Corporation as it sees fit from time to time to attend at meetings of the Committee and to assist in the discussion and consideration of the matters being considered by the Committee. However, the Committee shall ensure that its members meet regularly, and in no case less frequently than quarterly, on an in camera basis without the participation of non-independent directors, management, internal auditors or external auditors.
7. The Committee shall forthwith report the results of meetings and reviews undertaken and any associated recommendations to the Board. Minutes of the Committee will be recorded and maintained by the Secretary to the Committee, and shall be circulated to directors who are not members of the Committee or otherwise made available at a subsequent meeting of the Board.
8. Any members of the Committee may be removed or replaced at any time by the Board and will cease to be a member of the Committee as soon as such member ceases to be a director. The Board may fill vacancies on the Committee by appointment from among its members. If and whenever a vacancy exists on the Committee, the remaining members may exercise all its powers so long as a quorum remains. Subject to the foregoing, following appointment as a member of the Committee, each member will hold such office until the Committee is reconstituted.
9. Any issues arising from these meetings that bear on the relationship between the Board and management should be communicated by the Committee Chair to the Chairman of the Board or to the Lead Director, as appropriate.
10. The Committee shall meet with the external auditor at least once per year (in connection with the preparation of the year end financial statements) and at such other times as the external auditor and the Committee consider appropriate.
11. The Committee shall meet in separate, non-management, closed sessions with the senior internal audit executive at each regularly scheduled meeting.
